

# **UPRN System Integration "Snapshot" Infographic**

## What is it?

We have created an infographic that provides a graphical 'snapshot' of UPRN integrations with key system within your local authority.

It illustrates information about:

- the name of the software being used
- the system's reliance on the UPRN
- the address data currency within the system
- the method used to update the system with address data.

The infographic can be used for whatever purpose you like such as:

- highlighting which departments / suppliers to engage with to improve integration
- a tool to show senior management how well integrated the UPRN is
- a tool to gain buy-in from senior management / other teams to assist with integrating with the UPRN
- identifying specific areas to focus on to improve integration

## What information has been used to create this?

The infographic utilises your responses to the address Improvement Schedule questionnaire 2021/22 and draws on the information submitted specifically around system integrations to create the visuals that you see.

## What systems are included?

The 11 key systems listed below are represented:

- 1. Council Tax
- 2. Customer Relationship Management (CRM)
- 3. Building Control
- 4. Electoral Registration
- 5. Environmental Health
- 6. Education Management
- 7. Housing
- 8. Land Charges
- 9. Planning
- 10. Social Care
- 11. Refuse Collection

Please note that the infographic acknowledges and states that other systems will be integrated by the authority, but detailed information on these is not captured in the

Improvement Schedule questionnaire and therefore cannot be represented in the infographic.

## What information does the infographic show?

For each system listed above, the infographic displays the software supplier used plus a colour coded system (red, amber green) depicting measures across 3x areas as captured within the Improvement Schedule questionnaire:

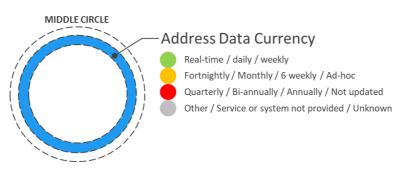

#### Measure 1: System reliance on the UPRN

#### Infographic key

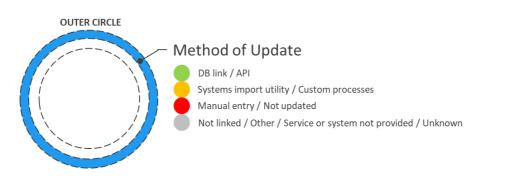

#### **Measure 2: Address Data Currency**

#### Infographic key

#### **Measure 3: Method of Update**

#### Infographic key

Please note that in some cases responses to the above, including software systems in use have had to be standardise or generalised to be consistent. Please contact <u>communications@geoplace.co.uk</u> should you wish to have an amendment made.

## **Integration scores**

Integration scores for the 3x below measures are also calculated:

- Measure 1: System reliance on the UPRN (maximum score of 10)
- **Measure 2:** Address Data Currency (maximum score of 10)
- Measure 3: Method of update (maximum score of 10)

These have been calculated in the following way:

#### Step 1:

• Each response is categorised scored on a scale of 0 – 10:

**0** = Immediate improvement required *For example:* 

-System is not reliant on the UPRN in any way -Currency of data is very low or not updated -Method of update is manual or not updated

**10** = Best possible response For example:

> -System is completely reliant on the UPRN -Currency of data is the highest it can be -Method of update is real-time

#### Step 2:

- The total "score" for each of the 3x measures across all systems / services that are provided by the authority is calculated.
- Systems and services that are marked as "Service not provided" are excluded.

#### Step 3:

- The respective total for each measure is divided by the number of systems / services provided by the authority (maximum is 11).
- The figure is denoted to 1 decimal place and rounded down to obtain the "score" for the specific measure.
- The maximum score that can be obtained is 10.

#### **Calculation of the "Overall Integration Score"**

- This is simply the average of the scores obtained for the 3x measures.
- The overall figure is denoted to 1 decimal place and rounded down.
- The maximum score that can be obtained is 10.

#### **Calculation of the "National Averages"**

- A national average for each of the 3x measures has been calculated to provide context to each authority on how they compare to other authorities at a national level.
- The "National Average" is the average of all authority averages for that measure, denoted to 1 decimal place and rounded down.
