

Address Data Entry Conventions: Life Cycle Guidance and Best Practice

May 2025 version 1.8

This document has been prepared by GeoPlace® and the
Address Data Entry Conventions Technical Working Group

Table of contents

1.0 Property life cycle.....	4
1.1 Background.....	4
1.2 Source data.....	5
1.3 Policy changes	5
2.0. Basic Land and Property Unit (BLPU)	12
2.1 BLPU Logical Status	12
2.2 BLPU State	14
2.3 BLPU classifications	16
2.4 Organisation Name.....	16
2.5 Representative Point Code (RPC)	16
2.6 Cross Reference.....	17
2.7 Cross Reference - planning information	18
3.0. Local Land and Property Identifier (LPI).....	20
3.1 Managing LPIs.....	20
3.2 Property address /description.....	20
3.3 LPI Logical Status	20
3.4 Official Address field	22
3.5 Postal address fields.....	22
4.0 New Street Records and Street Record BLPUs.....	23
4.1 New Street Records for preconstruction streets	23
4.2 Street Records for streets under construction	23
4.3 Street Records for open streets	23
4.4 Street BLPUs	24
5.0 Tracking address change intelligence	25
5.1 Conventions.....	25
6.0 Life cycle stages of a property and appropriate codes	26
6.1 Preconstruction	26
6.2 Under construction	27
6.3 Completion	28
6.4 Unoccupiable / unusable / derelict.....	29
6.5 No longer existing.....	29
7.0 Best practice examples.....	31
Appendix 1 - New development:	31

Appendix 2 – Redevelopment:	31
Appendix 3 – Conversion:	31
Appendix 4 – Demolition:	31
8.0 Summary of codes	32
8.1 BLPU_LOGICAL_STATUS	32
8.2 BLPU_STATE	32
8.3 LPI_LOGICAL_STATUS	33
9.0 Glossary of defined terms	34
9.1 Verbs used	34
9.2 Other terms used	35
Appendix 1 - New development	36
Single infill property	36
Street naming and numbering process complete before works on site start	36
Street naming and numbering process not complete before works on site start	39
Multiple properties on a greenfield site	43
Street naming and numbering process complete before works on site start	43
Street naming and numbering process not complete before works on site start	47
Appendix 2 - Redevelopment	51
Redevelopment of brownfield site – single property to multiple properties	51
Street naming and numbering process complete before works on site start	51
Street naming and numbering process not complete before works on site start	55
Redevelopment of brownfield site – multiple properties to single property	60
Street naming and numbering process complete before works on site start	60
Street naming and numbering process not complete before works on site start	63
Appendix 3 - Conversion	66
Conversion – single property to single property	66
Street naming and numbering process complete before works on site start	66
Street naming and numbering process not complete before works on site start	69
Conversion – single property to multiple properties	71
Street naming and numbering process complete before works on site start	71
Street naming and numbering process not complete before works on site start	73
Appendix 4 - Demolition	76
Demolition of a single property	76
Demolition of a parent shell property with multiple child properties	78

1.0 Property life cycle

1.1 Background

1.1.1 Introduction

Best practice and examples for capturing information throughout the life cycle of a property is provided in this document. Starting from a piece of land suitable for development to demolition and redevelopment, these events will prompt necessary updates in the Local Land and Property Gazetteer (LLPG) and be provided to GeoPlace® for synchronising, matching and validating before being published by Ordnance Survey (OS) in the AddressBase® range of products. Consistently following these guidelines will guarantee that Local Land and Property Gazetteers and AddressBase are fit for their intended purposes.

1.1.2 Users of life cycle data

Many organisations such as Ordnance Survey (OS), the Valuation Office Agency (VOA), Health and Safety Executive (HSE), National House Building Council (NHBC), local authorities and emergency services have a need for life cycle data. For example:

- emergency services are forewarned about the physical state of the property they are attending for example a complete residential property may require a different response resource to a derelict building
- OS use the life cycle of a record to trigger their surveying programme and subsequently update base mapping efficiently
- local authorities can use early life cycle data for strategic planning policy
- local authorities can use life cycle information to trigger services such as refuse collection.

1.1.3 Poor life cycle data

Poor life cycle data in a Local Land and Property Gazetteer can cause the following:

- delays in programming the delivery of services to new properties
- delays for people in accessing vital key services
- service delivery issues for emergency services
- delays to the timely updating of OS mapping
- inefficiencies for the users of address and mapping data.

1.2 Source data

Each Authority Address Custodian is responsible for establishing protocols to receive and compile address change intelligence to maintain the currency of information in gazetteers. Common sources of this data include:

- planning related application approvals
- building control commencements, completions and demolitions
- council tax and national non-domestic rates (NNDR)
- customer relationship management (CRM) systems
- electoral register
- local authority Licencing, environmental health, waste services and trading standards systems
- reports from GeoPlace
- Ordnance Survey (OS) products
- Valuation Office Agency (VOA)
- Postal Address File (PAF®)
- emergency services including local police and fire services
- missing and incorrect address information from web forms and customer service centres.

Functions that rely heavily on address data are likely to serve as valuable sources of address change intelligence.

1.3 Policy changes

1.3.1 Introduction to policy changes

The full life cycle of the Basic Land and Property Unit (BLPU) from the preconstruction stage to demolition or conversion is captured in the combination of BLPU Logical Status and BLPU State codes.

Changes in the use and description of some of the Logical Status and State Codes aim to provide clarity, limit inconsistencies in their use, and simplify the life cycle stages.

1.3.2 BLPU LOGICAL_STATUS

Logical Status refers to the level of acceptance of the Basic Land and Property Unit (BLPU) record by the local authority gazetteer custodian. It is about the gazetteer record rather than what is on the ground in the real world. Previous guidance allows for an under construction BLPU to be captured either with an Approved or Provisional

Logical Status with no apparent differences between the two. This best practice guidance clarifies the use of Approved and Provisional BLPU Logical status.

1.3.2.1 BLPU LOGICAL_STATUS = 1 (Approved)

All new BLPUs that have been through the street naming and numbering process should have a BLPU Logical Status of Approved. This should be the case even if the building is still at the preconstruction or construction stage. This also includes BLPUs which are being added to the gazetteer when the property is complete, regardless of street naming and numbering status.

1.3.2.2 BLPU LOGICAL_STATUS = 6 (Provisional)

All new BLPUs that have not been officially addressed and are still at the planning or construction phase should have a BLPU Logical Status of Provisional. In practice this should be limited to BLPUs created for plots in new developments at the preconstruction or construction stage where street naming and numbering has not been completed.

1.3.3 BLPU STATE

The BLPU STATE field will become mandatory (except for Rejected BLPUs) so that all different stages in the life cycle of the BLPU are recorded consistently. Previously BLPU STATE was only mandatory for BLPUs with a LOGICAL_STATUS = 5 (Candidate) or 6 (Provisional).

Each state now describes the physical state of the BLPU and any references to the use or occupancy of the BLPU have been removed.

Based on the previous descriptions, an unoccupied BLPU state may refer to an unoccupiable / derelict property or simply a temporarily vacant property. From now on, a property being temporarily vacant should not be considered a separate life cycle stage.

Similarly, it has been unclear whether the BLPU STATE should be updated from Under Construction to In Use as soon as the BLPU is structurally complete or only when actually in use and occupied. The descriptions now seek to make the use of these codes clear.

The table below describes the changes in the naming and descriptions of the BLPU STATE codes.

Code	BLPU STATE old description	Change	BLPU STATE new description
1	Under construction	no change	Under construction
2	In use	new purpose	Complete
3	Unoccupied	new purpose	Unoccupiable / unusable / derelict
4	No longer existing	no change	No longer existing
5	Planning application received *	deleted*	
6	Planning permission granted	new purpose	Preconstruction
7	Planning permission refused *	deleted*	
Null	Field not completed	conditional	BLPU LOGICAL_STATUS = 1 to 8: Mandatory that field must not be Null. BLPU LOGICAL_STATUS = 9: field may be Null

* Objects with BLPU STATE = 5 (Planning application received) or 7 (Planning permission refused) may be held in gazetteer management systems but must be held as internal records only and must not be sent to GeoPlace until the BLPU STATE code changes to 1,2,3,4 or 6.

1.3.4 BLPU LOGICAL_STATUS and BLPU STATE combinations as a result of policy changes

The table below shows possible combinations of BLPU Logical Status and BLPU State depending on construction stage for a new property.

Street naming and numbering	Construction stage	BLPU LOGICAL_STATUS	BLPU STATE
Complete	Not yet commenced	1 = Approved	6 = Preconstruction
Complete	Under construction	1 = Approved	1 = Under construction
Complete	Suitable for use	1 = Approved	2 = Complete
Not Complete	Not yet commenced	6 = Provisional	6 = Preconstruction
Not Complete	Under construction	6 = Provisional	1 = Under Construction
Not Complete *	Suitable for use	1 = Approved	2 = Complete

* It is best practice to ensure that street naming and numbering is completed ahead of construction being completed.

1.3.5 Permitted BLPU / LPI LOGICAL_STATUS and BLPU LOGICAL_STATUS/ BLPU STATE combinations as a result of policy changes

The table below shows the combinations of BLPU / LPI LOGICAL_STATUS and BLPU LOGICAL_STATUS / BLPU STATE that are now permitted. See [section 2.2](#) for additional guidance.

BLPU LOGICAL_STATUS	Mandatory single LPI LOGICAL_STATUS record	Other permitted multiple LPI LOGICAL_STATUS values	Permitted BLPU STATE codes
1 = Approved	1 = Approved	1 ^a = Approved 3 = Alternative 5 = Candidate 6 = Provisional 7 = Rejected external 8 = Historical 9 = Rejected internal	1 = Under construction 2 = Complete 3 = Derelict/ unoccupiable/ unusable 6 = Preconstruction
5 ^b = Candidate	5 ^b = Candidate	5 ^b = Candidate	1 = Under construction, 2 = Complete, 3 = Derelict/ unoccupiable/ unusable 4 = No longer existing, 6 = Preconstruction

BLPU LOGICAL_STATUS	Mandatory single LPI LOGICAL_STATUS record	Other permitted multiple LPI LOGICAL_STATUS values	Permitted BLPU STATE codes
6 = Provisional	6 = Provisional	6 = Provisional 7 = Rejected external 8 = Historical 9 = Rejected internal	1 = Under construction 6 = Preconstruction
7 = Rejected external	7 = Rejected external	7 = Rejected external 9 = Rejected internal	1 = Under construction 2 = Complete 3 = Derelict/ unoccupiable/ unusable 4 = No longer existing 6 = Preconstruction
8 = Historical	8 = Historical	7 = Rejected external 8 = Historical 9 = Rejected internal	4 = No longer existing

BLPU LOGICAL_STATUS	Mandatory single LPI LOGICAL_STATUS record	Other permitted multiple LPI LOGICAL_STATUS values	Permitted BLPU STATE codes
9 = Rejected internal	9 = Rejected internal	9 = Rejected internal	Null, 1 = Under construction 2 = Complete 3 = Derelict/ unoccupiable/ unusable 4 = No longer existing 6 = Preconstruction

Note a – Multiple LOGICAL_STATUS = 1 (Approved) LPIs are only allowed if they have different languages for example Welsh / English.

Note b – LOGICAL_STATUS = 5 (Candidate), is reserved for transferring Candidate Records from GeoPlace to the Authority Address Custodian for review.

2.0. Basic Land and Property Unit (BLPU)

2.1 BLPU Logical Status

All BLPUs shall have a mandatory LOGICAL_STATUS which is to record the status of the BLPU within the gazetteer.

The National Address Gazetteer (NAG) contains current and historical entries to enable data users to trace changes to land and property details. The table below shows the acceptable BLPU Logical Status codes that shall be used:

Code	LOGICAL_STATUS description	Explanatory notes
1	Approved	<p>BLPUs which the Authority Address Custodian considers to be the current and complete record of the object.</p> <p>Objects whose address has been agreed through the street naming and numbering process should have a Logical Status of Approved.</p> <p>Non addressable objects that would not have been through the street naming and numbering process should also have a Logical Status of Approved.</p>
5	Candidate	<p>Candidate BLPUs must not be created by the Authority Address Custodian. Candidates may be submitted by an external source and the correct BLPU Logical Status applied before insertion into the Local Land and Property Gazetteer.</p>

Code	LOGICAL_STATUS description	Explanatory notes
6	Provisional	<p>BLPUs created for objects in the street naming and numbering / construction stages of development.</p> <p>Provisional should only be used for the very early life cycle of the object. For example, when adding pre-build plots whose address has not been confirmed by the street naming and numbering process.</p> <p>An object should not have a Logical Status of Provisional if its address has been confirmed by the street naming and numbering process.</p>
7	Rejected external	<p>Rejected external BLPUs are records received from an external source as Candidates which are deemed by the Authority Address Custodian to be an inappropriate or an inaccurate representation of a real-world object.</p> <p>Local convention determines whether rejected records are deleted from Local Land and Property Gazetteers or retained for auditing purposes.</p>
8	Historical	<p>Objects which no longer exist as an entity in the real world. The record should remain in the gazetteer to facilitate the maintenance of cross references to other datasets.</p> <p>These should also be retained in the gazetteer for future scenarios where for example commercial units are split and then re-merged. In this case the historical record would become Approved again. If at a later date the commercial unit is split once more, the Approved property would once more become Historical.</p>

Code	LOGICAL_STATUS description	Explanatory notes
9	Rejected internal	<p>Rejected internal BLPUs are records received from an internal source which are deemed to be an inappropriate or inaccurate representation of a real world object.</p> <p>Local convention determines whether rejected records are deleted from Local Land and Property Gazetteers or retained for auditing purposes.</p>

2.2 BLPU State

2.2.1 BLPU STATE codes

Authority Address Custodians shall enter the current physical state of a BLPU in the BLPU STATE field. This is a mandatory field for all BLPUs where the LOGICAL_STATUS code = 1 to 8. The BLPU State identifies the current life cycle stage of a property or land object based on its physical state rather than occupancy. The BLPU State codes and their definitions (where permitted to send to GeoPlace) are described below:

Code	BLPU STATE	Explanatory notes
1	Under construction	BLPUs that are currently under construction / reconstruction or redevelopment
2	Complete	<p>BLPUs that are:</p> <ul style="list-style-type: none"> • useable / fit for purpose as per the BLPU classification for example a house or advertising hoarding • buildings that are suitable for occupation • land. <p>Note: this includes BLPUs listed above that are vacant</p>
3	Derelict / unusable / unoccupiable	<p>BLPUs that are:</p> <ul style="list-style-type: none"> • not useable / fit for purpose • buildings that are not generally wind and watertight / are derelict • buildings not suitable for beneficial occupation.

4	No longer existing	BLPUs that are: <ul style="list-style-type: none"> no longer in existence for example due to conversion or demolition land that is no longer in existence for example a BLPU that is for a whole development site where it now has individual BLPU for the new buildings.
6	Preconstruction	BLPU where construction works have not commenced
Null	Field not completed	This field may only be Null if the BLPU Logical Status = 9 (rejected internal)

2.2.2 BLPU STATE codes for provisional records

Only BLPU STATE = 1 (Under construction) or 6 (Preconstruction) shall be used for BLPU where the LOGICAL_STATUS = 6 (Provisional).

2.2.3 BLPU STATE code for records no longer existing

Only BLPU STATE = 4 (No longer existing) shall be used for BLPU where the LOGICAL_STATUS = 8 (Historical).

BLPU STATE = 4 (No longer existing) must not be used for BLPU where the LOGICAL_STATUS = 1 (Approved) or LOGICAL_STATUS = 6 Provisional).

2.2.4 BLPU STATE codes for deleted records

Objects with BLPU STATE = 5 (Planning application received) or 7 (Planning permission refused) may be held in gazetteer management systems but must be held as internal records only and must not be sent to GeoPlace until the BLPU STATE code changes to 1,2,3,4 or 6. Alternatively, planning information can be held as an Application Cross Reference. [See section 2.7](#) for further information.

2.2.5 Null BLPU STATE code

BLPU STATE is now mandatory. The only exception to this is where the BLPU LOGICAL_STATUS = 9 (Rejected internal). As these records are not validated by GeoPlace, they may remain Null.

2.3 BLPU classifications

2.3.1

The BLPU Classification shall be maintained to reflect the current or most recent usage as part of the life cycle of the property. A current list of classifications can be found in the Address Data Entry Conventions (2025) guidance Appendix C.

2.3.2

Where a BLPU is under reconstruction for example under conversion, the BLPU classification should reflect only the primary or secondary level of the BLPU Classification where current / future use is ambiguous or unknown.

2.3.3

Classification of neighbouring properties should be reviewed following completion. For example, if a pair of semi-detached properties has a new house built joining them to make a terrace, then the original properties will need to be changed from RD03 (Semi-detached) to RD04 (terraced) also.

2.4 Organisation Name

For information and conventions for maintaining the ORGANISATION Name field, please refer to the Address Data Entry Conventions (2025) guidance section 6.3.12.

2.5 Representative Point Code (RPC)

2.5.1 Codes

The Representative Point Code (RPC) indicates the confidence level of the co-ordinates of the BLPU. One of the following codes must be used throughout the life cycle of the BLPU.

RPC code	RPC description
1	Visual centre
2	General internal point
4	Start of referenced Street

2.5.2 BLPUs where base mapping is available

If base mapping is available for the new BLPU, the Authority Address Custodian should use RPC = 1 (Visual centre) or 2 (General internal point).

The exception to this is for Street BLPUs which should have RPC = 4 (Start of referenced street).

See Address Data Entry Conventions (2025) guidance section 6.3.11 for further information.

2.5.3 BLPUs where base mapping is unavailable

For new developments where base mapping is unavailable at the time of creating a BLPU, RPC = 2 (General internal point) should be used if an estimate is made of the actual location, for example by geo-referencing the site plan.

Alternatively, use RPC = 4 (Start of a referenced street) on a temporary basis. Either way, once base mapping is available, the coordinates for the BLPU must be corrected and the RPC updated to RPC = 1 (Visual centre) or RPC = 2 (General internal point).

See Address Data Entry Conventions (2025) guidance section 6.3.11 for further information.

2.6 Cross Reference

The Authority Address Custodian should maintain cross references relevant to the life cycle of a property such as street naming and numbering and council tax / national non-domestic rates (NNDR) functions.

For information and conventions for adding and maintaining cross references, please refer to the Address Data Entry (2025) guidance section 8.

2.7 Cross Reference - planning information

2.7.1

Some Authority Address Custodians have historically used the following BLPU State codes in their Local Land and Property Gazetteer to record the stage of a related planning application (as defined in Address Data Entry Conventions (2025) guidance section 6.3.9):

- BLPU STATE = 5 (Planning application received) - code now deleted
- BLPU STATE = 6 (Planning permission granted) - code now redefined to 'Preconstruction'
- BLPU STATE = 7 (Planning permission refused) - code now deleted.

Objects with BLPU STATE = 5 (Planning application received) or 7 (Planning permission refused) may be held in gazetteer management systems but must be held as internal records only and must not be sent to GeoPlace until the BLPU STATE code changes to 1,2,3,4 or 6.

2.7.2

BLPU State = 6 (formerly planning permission granted) may still be used but its use has been redefined as 'Preconstruction'. This state would be used for a BLPU where works have not commenced, for example when adding BLPUs for plots.

2.7.3

Authority Address Custodians can maintain related planning application stages using the Application Cross Reference record as suggested below.

This is not mandatory and is guidance for authorities who historically used BLPU State Codes = 5 (Planning application received), 6 (Planning permission granted) and 7 (Planning permission refused) as an alternative way to hold this information.

Planning related Application Cross Reference records do not need to be sent to GeoPlace.

Field	Description	Example
SOURCE	Code which identifies the external dataset to which the record is matched	4 digit LOCAL_CUSTODIAN_CODE followed by suffix "PL" (Planning) for example: "1415PL"
CROSS_REFERENCE	Unique key of entry in external dataset	Planning application reference followed by planning status defined by local policy for example: "GP/2023/001178/REC" for an application received but not determined "GP/2023/001345/GTD" for an application granted consent "GP/2023/001257/REF" for an application refused
XREF_KEY	Unique identifier within the Local Land and Property Gazetteer for this Record	usually automated in the Local Land and Property Gazetteer software

For further information on Application Cross References see the Address Data Entry Conventions (2025) guidance section 8.

3.0. Local Land and Property Identifier (LPI)

3.1 Managing LPIs

The general principles of managing LPI records are detailed in the Address Data Entry Conventions (2025) guidance section 7. However, there are some fields that specifically relate to the life cycle of the property.

3.2 Property address /description

The address of the property shall be managed by the use of additional LPIs to reflect the current best description/name for the property throughout its life cycle. For example, a property can go through the following address changes, each of which will have its own LPI:

- Plot 1, Alpha Development Site King Street, Anytown
- Show Home, Alpha Development Site, King Street, Anytown
- 14 Prince Drive, Anytown
- Site of/former 14 Prince Drive, Anytown.

3.3 LPI Logical Status

3.3.1

A BLPU may have many LPIs, therefore a LPI will have a mandatory Logical Status in the same way that a BLPU does, to define which of the LPI records is the most current. One of the following Logical Status codes must be used to reflect the current status of the BLPU.

Code	Logical Status description
1	Approved Preferred
3	Alternative
5	Candidate (reserved for the Candidate process)
6	Provisional
7	Rejected Record (externally sourced reserved for the Candidate process)
8	Historical
9	Rejected Record (internally sourced)

3.3.2

Each time a new LPI is created for a BLPU because of a life cycle change, the LPI for the former name/ description should be made historical by updating the LPI Logical Status to 8 (Historical).

3.3.3

There must only ever be one Logical Status = 1 (Approved) LPI for a BLPU where the BLPU Logical Status = 1 (Approved), unless the name is recorded in multiple languages for example both Welsh and English.

3.3.4

Where an existing property that is already Logical Status = 1(Approved) is renamed / renumbered and the changeover date is in the future, where possible this should be held as a Logical Status = 6 (Provisional) LPI until the change takes place. This is because it is not possible to have more than one approved LPI.

3.4 Official Address field

3.4.1 Introduction

The use of the Official Address field is best practice but is not mandatory. It should determine the 'official' LPI used for identifying a BLP. The intention of this field is to indicate whether the LPI has been subject to the street naming and numbering process. For further guidance on use of the Official Address field, please refer to the Address Data Entry Conventions (2025) guidance Section 7.3.6.

3.4.2 Official Address field permitted values

Permitted values are:

Value	Description
"Y"	Official Address
"N"	Unofficial Address
"R"	Postcode and post town requested from Royal Mail
"C"	Postal Address confirmed and ready for notification
Null	Not defined

3.5 Postal address fields

For guidance on the use of the POSTAL_ADDRESS, POSTCODE and POSTTOWN fields, please refer to the Address Data Entry Conventions (2025) guidance section 7.3.5.

4.0 New Street Records and Street Record BLPUs

4.1 New Street Records for preconstruction streets

4.1.1

It is not mandatory to add a new Street Record to the Local Street Gazetteer until a new street is under construction, however local authority address custodians may add them to their Local Land and Property Gazetteers sooner than this.

4.1.2

A typical example would be where a local authority address custodian creates BLPUs for plots where street naming and numbering has been completed but works have not commenced on site.

4.1.3

Where no works have commenced on site, the Street Record may be created in the Local Land and Property Gazetteer only with STREET STATE = 5 (Street for addressing purposes only).

4.1.4

The new Street Record must not be exported to the Local/National Street Gazetteer at this stage.

4.2 Street Records for streets under construction

4.2.1

Once a street has been pegged out on the site, the Street Record must be added to or updated (if previously created for addressing purposes only) in the Local Land and Property Gazetteer. The Street Record must have STREET STATE = 1 (Under construction).

4.2.2

The Street Record must now be added to the Local Street Gazetteer.

4.3 Street Records for open streets

4.3.1

A street is considered Open as soon as vehicular access is available to it, or if any BLPU on the street has a BLPU_STATE = 2 (Complete). The Street Record should be updated to STREET STATE = 2 (Open).

4.4 Street BLPUs

4.4.1

Once the Street Record has been created, it will require a corresponding Street BLPU with the PAO_TEXT = Street Record to be created. The BLPU LOGICAL_STATUS and BLPU_STATE of the Street BLPU must reflect the physical state of the street itself. See Address Data Entry Conventions (2025) guidance section 6.3.20.

5.0 Tracking address change intelligence

5.1 Conventions

5.1.1

At each stage of the life cycle, one LPI Record is deemed to be the Approved Preferred LPI and the Official Address for the BLPU. As change occurs on the ground, the Approved Preferred LPI and the Official Address value should be amended as appropriate.

5.1.2

It is possible that the completed property is accessed from a different street from the original development site because of the construction of new estate roads. In this case it is likely that some Historical LPIs for a property refer to a different USRN from the Approved Preferred LPI's USRN. More detail of the life cycle of BLPU's within Local Land and Property Gazetteer is outlined in the examples in the Appendices.

6.0 Life cycle stages of a property and appropriate codes

This section intends to show the key stages throughout the life cycle of a property and the principal codes to use at each stage. For detailed working examples, see Appendices 1 to 4 of this life cycle document.

All new developments should be recorded in the Local Land and Property Gazetteer when street naming and numbering authority activities commence for these sites or when construction begins, whichever occurs first. The Authority Address Custodian may create 'plots' for new properties in the Local Land and Property Gazetteer, before either of these activities have commenced.

6.1 Preconstruction

6.1.1 Street naming and numbering not complete

The Authority Address Custodian may add BLPUs as plots before construction works commence and before the street naming and numbering process has been completed. These BLPUs should be added to the Local Land and Property Gazetteer with BLPU LOGICAL_STATUS = 6 (Provisional) and BLPU STATE = 6 (Preconstruction). The LPI should have the plot number as the address and the Official Address = N (No). Cross References such as planning and building control may be added if it is local policy to add these.

The BLPUs for plots may be addressed directly off an existing street or may have a parent shell addressed to the existing street the development is being built off. Alternatively, where a new street is part of the development, this may be added to the Local Land and Property Gazetteer at this stage.

See [section 4](#) of this document for further details about adding new streets.

6.1.2 Street naming and numbering complete

Where the street naming and numbering process has been completed but construction works have not commenced, these BLPUs should be added to the Local Land and Property Gazetteer with LOGICAL_STATUS = 1 (Approved) and BLPU STATE = 6 (Preconstruction). The LPI must have the official approved address and should have the Official Address = Y (Yes). The street naming and numbering Cross References should be added. Other Cross References such as for planning and building control may also be added if it is local policy to add these.

If street naming and numbering has been completed but it is not known if construction work has started, it should be assumed that it has, and the objects should be added as under construction. See [section 6.2](#).

Life cycle stage		Preconstruction
Logical Status	No SNN	6 Provisional
	SNN Complete	1 Approved
BLPU State Code		6 Preconstruction
LPI Address	No SNN	use plot number
	SNN Complete	use official address
Official Flag	No SNN	N
	SNN Complete	Y
Application Cross Ref	No SNN	DC / BC (if local policy to add these)
	SNN Complete	SNN 3 (New build) or 1 (Conversion)

6.2 Under construction

6.2.1 Street naming and numbering not Complete

The Authority Address Custodian may have already added BLPUs as plots before construction works commenced. If this is the case, these BLPUs should be updated in the Local Land and Property Gazetteer with to BLPU STATE = 1 (Under construction).

If BLPUs were not created as plots before construction work commenced, these BLPUs should be added to the Local Land and Property Gazetteer with LOGICAL_STATUS = 6 (Provisional) and BLPU STATE = 1 (Under construction). The LPI should have the plot number as the address and the Official Flag = N (No).

If requested via candidates, under construction properties must be created regardless of street naming and numbering status.

Cross References such as planning and building control may be added if it is local policy to add these.

6.2.2 Street naming and numbering complete

Where the street naming and numbering process was completed at preconstruction stage, these BLPUs should already exist and will therefore need to be updated with BLPU STATE = 1 (Under construction).

Where BLPUs have not already been created, these BLPUs must be added to the Local Land and Property Gazetteer with LOGICAL_STATUS = 1 (Approved) and BLPU STATE = 1 (Under construction). The LPI must have the official approved address and should have the Official Flag of Y (Yes). The street naming and numbering Cross References should be added.

Other Cross References such as planning and building control may be added if local policy to add these.

Life cycle stage		Under construction
Logical Status	No SNN	6 Provisional
	SNN Complete	1 Approved
BLPU State Code		1 Under construction
LPI Address	No SNN	use plot number
	SNN Complete	use official address
Official Flag	No SNN	N
	SNN Complete	Y
Application Cross Ref	No SNN	DC / BC (if local policy to add these)
	SNN Complete	SNN 3 (New build) or 1 (Conversion)

6.3 Completion

If not already done so, the BLPU must be added at this stage, even if street naming and numbering is not complete.

In either case the object must have BLPU LOGICAL_STATUS = 1 (Approved) and BLPU STATE = 2 (Complete).

If street naming and numbering is not yet complete, the LPI should have a logical descriptive text and the Official Flag = N (No).

Once street naming and numbering is complete, the LPI should be made historical if the address changes, and a new one created for the official address. The Official Flag should be updated to Y (Yes). The street naming and numbering (SNN), Valuation Office Agency (VOA) and electoral registration (EREG) Cross References must be added where they are available.

Life cycle stage		Completion
Logical Status	No SNN	1 Approved
	SNN Complete	1 Approved
BLPU State Code		2 Complete
LPI Address	No SNN	use descriptive text
	SNN Complete	use official address
Official Flag	No SNN	N
	SNN Complete	Y
Application Cross Ref	No SNN	VOA EREG DC / BC (if local policy to add these)
	SNN Complete	SNN 3 (New build) or 1 (Conversion) VOA EREG DC / BC (if local policy to add these)

6.4 Unoccupiable / unusable / derelict

When a building becomes unoccupiable, unusable or derelict for example taken out of rating / council tax as not capable of occupation, the BLPU STATE code should be updated to 3 (Unoccupiable / unusable / derelict). Cross Reference fields populated such as those for council tax may require review.

Life cycle stage	Logical Status	BLPU State code	LPI address	Official Flag	Cross Reference
Unoccupiable / unusable / derelict	1 Approved	3 Unoccupiable / unusable / derelict	as existing	as existing	EREG / VOA will require review

6.5 No longer existing

When a property no longer exists, for example two properties are merged into one, or a BLPU that was created for a development site is completely consumed by the new development, the BLPU must not be deleted from the Local Land and Property Gazetteer. The BLPU LOGICAL_STATUS should be updated to 8 (Historical) and the BLPU STATE = 4 (No longer existing).

Where appropriate, the current LPI should be made historical and a new LPI added. The Address Data Entry Conventions (2025) guidance advises that for the address of the new LPI, to use 'Former....' when demolition occurs, and the property name or number may be reused by the SNN Authority or otherwise use 'Site of....'.

The street naming and numbering Cross Reference = 2 (Demolished) should be added.

Life cycle stage	BLPU Logical Status	BLPU State code	LPI address	Official Flag	Cross Reference
No longer existing	8 Historical	4 No longer existing	Make current LPI historical and add new LPI with address starting 'Former.....' if the property name or number will be reused by the SNN Authority or otherwise use 'Site of....'.	as existing	SNN 2 (Demolished)

7.0 Best practice examples

Typical life cycle scenarios have been worked through to provide guidance for Authority Address Custodians. These scenarios are included in the Appendices to this document.

Where appropriate, alternative examples are given for when street naming and numbering has been completed before and after the object is added to the LLPG.

Appendix 1 - New development:

- single infill property
- multiple properties on a greenfield site.

Appendix 2 – Redevelopment:

- single property to multiple properties on a brownfield site
- multiple properties to single property.

Appendix 3 – Conversion:

- single property to single property
- single property to multiple properties.

Appendix 4 – Demolition:

- demolition of a single property
- demolition of a parent shell property with multiple child properties.

8.0 Summary of codes

8.1 BLPU_LOGICAL_STATUS

No changes from the Address Data Entry Conventions (2016) guidance.

1	Approved
5	Candidate
6	Provisional
7	Rejected external
8	Historical
9	Rejected Internal

8.2 BLPU_STATE

BLPU_STATE CODE now mandatory for BLPUs with LSC 1 to 8.

1	Under Construction
2	Complete (changed from In Use)
3	Derelict/Unoccupiable/Unusable (changed from unoccupied)
4	No Longer Existing
(5)*	<i>Code not for use with LOGICAL_STATUS code = 1 to 8 (was planning permission received)</i>
6	Preconstruction (changed from planning permission granted)
(7)*	<i>Code not for use with LOGICAL_STATUS code = 1 to 8 (was planning permission granted)</i>

* BLPU STATE CODE = 5 (Planning application received) and BLPU STATE CODE = 7 (Planning permission refused) may still be used within gazetteer management software for internal local authority use. Objects with these state codes may continue to be held but must not be sent to GeoPlace until the BLPU STATE CODE = 1, 2, 3, 4 or 6.

8.3 LPI_LOGICAL_STATUS

No changes from the Address Data Entry Conventions (2016) guidance.

1	Approved
3	Alternative
5	Candidate
6	Provisional
7	Rejected External
8	Historical
9	Rejected Internal

Street naming and numbering process not complete before works on site start

Scenario: development of a new single detached house in the garden of 10 High Street to be addressed as 10A High Street.

In this example, there is an existing BLPU for 10 High Street that will remain unchanged throughout.

When work on site commences, a new BLPU for 10A High Street will need to be created.

Stage	Original BLPU for 10 High Street	New BLPU for 10A High Street
1 Garden of house is approved for development	BLPU for 10 High Street will already exist as below. <u>BLPU for 10 High Street</u> BLPU_LOGICAL_STATUS 1 (Approved) BLPU_STATE 2 (Complete) BLPU_CLASS RD02 (Detached house) <u>LPI for 10 High Street</u> LPI_PAO_START_NUMBER 10 LPI_LOGICAL_STATUS 1 (Approved) LPI_OFFICIAL_FLAG Y	Consent has been given for the new semi-detached house, but work may never happen. A new BLPU for the new house should not be created at this stage as the land is still the garden of 10 High Street.

Stage	Original BLPU for 10 High Street	New BLPU for 10A High Street
2 Development works start but street naming and numbering not completed	There should be no change to the BLPU or LPI for 10 High Street. <u>BLPU for 10 High Street</u> No change <u>LPI for 10 High Street</u> No change	Work has started and therefore the Authority Address Custodian may create a new BLPU and LPI for Land at 10 High Street. BLPU_LOGICAL_STATUS – As street naming and numbering is not complete this must be 6 (Provisional). BLPU_STATE – should be 1 (Under construction). BLPU_CLASS – As it is known what the development will be, this should be set to its approved use, in this case RD02 for a detached house. The RPC – this should be set to 1 (Visual centre) if the Authority Address Custodian is confident of the BLPU's coordinates otherwise 2 (General internal point). LPI_LOGICAL_STATUS – This must be 6 (Provisional). LPI_OFFICIAL_FLAG – As street naming and numbering is not complete, this should be set to N (no). <u>Create BLPU for Land at 10 High Street</u> BLPU_LOGICAL_STATUS 6 (Provisional) BLPU_STATE 1 (Under construction) BLPU_CLASS RD02 (Detached house) RPC 1 (Visual centre) or 2 (General internal point) <u>Create LPI for Land at 10 High Street</u> LPI_PAO_TEXT Land at 10 LPI_LOGICAL_STATUS 6 (Provisional) LPI_OFFICIAL_FLAG N

Stage	Original BLPU for 10 High Street	New BLPU for 10A High Street
<div>3A</div> <div>Development works underway and street naming and numbering completed</div> <div>If a BLPU for Land at 10 was not created at Stage 2, then this stage will be required to create a BLPU for 10A High Street</div>	<div>There should be no change to the BLPU or LPI for 10 High Street.</div> <div><u>BLPU for 10 High Street</u> No change</div> <div><u>Current LPI for 10 High Street</u> No change</div>	<div>This stage will only be required if a BLPU was not created at Stage 2. If a BLPU was created at Stage 2, skip to Stage 3B.</div> <div>A new BLPU and LPI for 12 High Street must be created.</div> <div>BLPU_LOGICAL_STATUS – As street naming and numbering is complete this must be set to 1 (Approved).</div> <div>BLPU_STATE – As street naming and numbering is complete, it is fair to assume that works will commence soon and therefore this should be set to 1 (Under construction) or for Authority Address Custodians who track building commencement, they may choose to use 6 (Preconstruction).</div> <div>BLPU_CLASS – As it is known what the development will be, this should be set to its approved use, in this case RD02 for a detached house.</div> <div>RPC – This should be set to 1 (Visual centre) if the Authority Address Custodian is confident of the BLPU's coordinates otherwise 2 (General internal point).</div> <div>Cross Reference – The street naming and numbering Cross Reference S3 (New build) should be added to the new BLPU.</div> <div>LPI_LOGICAL_STATUS – This must be 1 (Approved).</div> <div>LPI_OFFICIAL_FLAG – As street naming and numbering is complete, this should be set to Y (Yes).</div> <div><u>Create BLPU for 10A High Street</u> BLPU_LOGICAL_STATUS1 (Approved) BLPU_STATE1 (Under construction) BLPU_CLASSRD02 (Detached house) RPC1 (Visual centre) or 2 (General internal point)</div> <div><u>Add street naming and numbering Cross Reference</u> RECORD_IDENTIFIER S3 (New build)</div> <div><u>Create LPI for 10A High Street</u> LPI_PAO_START_NUMBER10A LPI_LOGICAL_STATUS1 (Approved) LPI_OFFICIAL_FLAGY</div>

Stage	Original BLPU for 10 High Street	New BLPU for 12 High Street
<div>3B</div> <div>Development works underway and street naming and numbering completed</div> <div>If a BLPU for Land at 10 was created at Stage 2, then this stage will be required to update the BLPU to 12 High Street</div>	<div>There should be no change to the BLPU or LPI for 10 High Street.</div> <div><u>BLPU for 10 High Street</u></div> <div>No change</div> <div><u>Current LPI for 10 High Street</u></div> <div>No change</div>	<div>This stage will only be required if a BLPU has been created at Stage 2. If a BLPU was not created at Stage 2, go back to Stage 3A.</div> <div>BLPU_LOGICAL_STATUS – As street naming and numbering is complete, this must be updated to 1 (Approved).</div> <div>Cross Reference – The street naming and numbering Cross Reference S3 (New build) should be added to the new BLPU.</div> <div>LPI_LOGICAL_STATUS for Land at 10 High Street – As street naming and numbering is now complete, the LPI is now historic so this must be updated to 8 (Historical).</div> <div>A new LPI must be created for 10A High Street.</div> <div>LPI_LOGICAL_STATUS for 10A High Street – As street naming and numbering is complete this must be 1 (Approved).</div> <div>LPI_OFFICIAL_FLAG for 10A High Street – As street naming and numbering is complete, this should be set to Y (Yes).</div> <div><u>Update BLPU for Land at 10 High Street – now approved</u></div> <div><div><div>BLPU LOGICAL_STATUS</div><div>1 (Approved)</div></div><div><div>BLPU_STATE</div><div>1 (Under construction)</div></div><div><div>BLPU_CLASS</div><div>RD02 (Detached house)</div></div><div><div>RPC</div><div>1 (Visual centre) or 2 (General internal point)</div></div></div> <div><u>Add street naming and numbering Cross Reference</u></div> <div><div><div>RECORD_IDENTIFIER</div><div>S3 (New build)</div></div></div> <div><u>Update LPI for Land at 10 High Street – now historical</u></div> <div><div><div>LPI_PAO_TEXT</div><div>Land at 10</div></div><div><div>LPI LOGICAL_STATUS</div><div>8 (Historical)</div></div><div><div>LPI_OFFICIAL_FLAG</div><div>N</div></div></div> <div><u>Create LPI for 10A High Street</u></div> <div><div><div>LPI_PAO_START_NUMBER</div><div>10A</div></div><div><div>LPI_LOGICAL_STATUS</div><div>1 (Approved)</div></div><div><div>LPI OFFICIAL FLAG</div><div>Y</div></div></div>

Multiple properties on a greenfield site

Street naming and numbering process complete before works on site start

Scenario – Development of 3 pairs of semi-detached houses in new cul-de-sac to be called 1-6 Old Farm Close on greenfield agricultural land at Old Farm

In this example, a BLPU for the agricultural land may already exist, in which case it would need to be updated to development land. If a BLPU for the agricultural land does not already exist, a new BLPU should be created for the development land. When construction of the houses completes, the BLPU for the development land should be made historic.

When street naming and numbering is complete, a new street record will need to be created for Old Farm Close along with new BLPUs for the new houses.

Stage	Original BLPU for Land at Old Farm	New BLPUs for 1 to 6 Old Farm Close and Street Record														
<div>1</div> <div>Agricultural land is approved for housing development</div>	<p>A BLPU and LPI for agricultural land at Old Farm may already exist. If this is the case, the BLPU_CLASS should be updated from LA (agricultural land) to LD (Development land).</p> <p>If a BLPU and LPI for the land does not already exist, then this should be created.</p> <p><u>Create or Update BLPU for Land at Old Farm</u></p> <table><tr><td>BLPU_LOGICAL_STATUS</td><td>1 (Approved)</td></tr><tr><td>BLPU_STATE</td><td>2 (Complete)</td></tr><tr><td>BLPU_CLASS</td><td>LD (Development land)</td></tr><tr><td>RPC</td><td>1 (Visual centre)</td></tr></table> <p><u>Create or Update LPI for Land at Old Farm</u></p> <table><tr><td>LPI_PAO_TEXT</td><td>Land at Old Farm</td></tr><tr><td>LPI_LOGICAL_STATUS</td><td>1 (Approved)</td></tr><tr><td>LPI_OFFICIAL_FLAG</td><td>N</td></tr></table>	BLPU_LOGICAL_STATUS	1 (Approved)	BLPU_STATE	2 (Complete)	BLPU_CLASS	LD (Development land)	RPC	1 (Visual centre)	LPI_PAO_TEXT	Land at Old Farm	LPI_LOGICAL_STATUS	1 (Approved)	LPI_OFFICIAL_FLAG	N	<p>Consent has been given for the new houses, but work may never happen. New BLPUs for the new houses should not be created at this stage as the land is still development land at Old Farm.</p>

Street naming and numbering process not complete before works on site start

Scenario: Development of 3 pairs of semi-detached houses in new cul-de-sac to be called 1-6 Old Farm Close on greenfield agricultural land at Old Farm.

In this example, a BLPUs for the agricultural land may already exist, in which case it would need to be updated to development land. If a BLPU for the agricultural land does not already exist, a new BLPU should be created for the development land. When construction of the houses completes, the BLPU for the development land should be made historic.

When works commence on site, a new street record will need to be created for Old Farm Close along with new BLPUs for the new houses.

Stage	Original BLPU for Land at Old Farm	New BLPUs for 1 to 6 Old Farm Close and Street Record												
<div>1</div> <div>Agricultural land is approved for housing development</div>	<p>A BLPU and LPI for agricultural land at Old Farm may already exist. Appendix 2 - Redevelopment

Redevelopment of brownfield site – single property to multiple properties

Street naming and numbering process complete before works on site start

Scenario – Demolition of a former industrial warehouse and site redeveloped to a new cul-de-sac of detached houses, 1 to 6 Arkwright Close.

In this example, there is an existing BLPU for the warehouse. This BLPU/LPI should be updated to development land when the building is demolished. When construction of the houses completes, this BLPU should be made historic.

When street naming and numbering completes, a new street record will need to be created along with new BLPU's for the new houses.

Redevelopment of brownfield site – multiple properties to single property

Street naming and numbering process complete before works on site start

Scenario – demolition of 2 light industrial workshops (12 and 14 Station Way) and development of factory (Brewery House, 12 Station Way).

In this example, there are 2 existing BLPUs for the industrial warehouses. These BLPUs/LPIs should be made historic when the buildings are demolished and a new BLPU for the development site created. When construction of the houses completes, the BLPU for the development land should be made historic.

Appendix 3 - Conversion

Conversion – single property to single property

Street naming and numbering process complete before works on site start

Scenario – A small local Fire Station is converted to commercial office space for single use. The property is named only and not numbered.

In this example, there is an existing BLPU for the fire station. This being the case, the original BLPU/LPI should be updated to reflect the new use as an office.
