

## USRN System Integration “Snapshot” Infographic

### What is it?

This infographic provides a graphical ‘snapshot’ of USRN integrations with key system within your local authority.

It illustrates information about the name of the software system being used and the level the authority aims to reach in 2024

The infographic can be used for whatever purpose you like such as:

- highlighting which departments / suppliers to engage with to improve integration
- a tool to show senior management how well integrated the USRN is
- a tool to gain buy-in from senior management / other teams to assist with integrating with the USRN
- identifying specific areas to focus on to improve integration

### What information has been used to create this?

The infographic utilises your responses to the Streets Improvement Schedule questionnaire 2023-24. It draws on the information submitted specifically around system integrations to create the visuals that you see.

### What systems are included?

These are the 15 key systems represented in the infographic:

1. Customer Relationship Management (CRM)
2. Traffic Regulation Orders
3. Community Safety
4. Highway Asset Management
5. Highways Maintenance
6. Legal
7. Street Lighting
8. Department for Transport Road Length Consultation (DfT R199b)
9. United Kingdom Pavement Management System (UKPMS)
10. Public Rights of Way (ProWs)
11. Education /Children’s Services
12. Adult Social Care
13. Waste Management
14. Planning
15. Parking

Please note that the infographic acknowledges and states that other systems may be integrated by the authority, but detailed information on these is not captured in the Improvement Schedule questionnaire and therefore cannot be represented.

### What information does the infographic show?

For each system listed above, the infographic displays a colour coded system (red, green) to indicate whether the system is integrated as per Improvement Schedule questionnaire:

At the top of the Infographic, you can find the 'Overall Integration Score'. This shows how many of the 15 listed systems have been integrated across the authorities on average and how your authority compares to this. A colour coded system (red, green, blue) is used to highlight whether your authority is above, below, or equal to the average score:

Iris Rodenbuesch (Senior GIS Analyst)  
Luke Studden (Data Acquisition and Integration Manager)
